WHY US?

As stated in the 130th article of our Constitution, it is "to train the manpower suitable for the needs of our nation and country in an order based on the principles of modern education". With this thought, it is to fulfill the requirements of being secular, contemporary and loyal to Atatürk's principles without compromise. Sensitive to all kinds of changes and developments that may affect people, giving importance to the interaction of people with their environment, accepting that individuals who need Health Services have health care rights just because they are human, offering their services equally to all individuals, protecting the integrity and dignity of individuals, To train Health Services personnel needed in compiling, arranging and presenting the findings obtained from scientific researches in various branches of medicine and health technology.

Our High School is structured in the order of contemporary education management approach. Efforts are being made to organize educational environments and strengthen the technology base. Our school successfully continues the education and training of changing and developing health policies and practices in order to train qualified health technicians who can meet the needs of Turkey.

Department of Medical Services and Techniques / Medical Laboratory Techniques Program

- **Academic Staff**

Students take lessons from respected lecturers who are experts in their fields, successful in academia, contributing to science, and giving value and support to students.

- **Versatile Curriculum**

In addition to theoretical education, practical training should be included in the university so that students become self-confident and successful individuals both in practice and after they become professional staff, and to practice at least 2 days a week for 1 year in hospitals contracted by Gaziantep Islamic Science and Technology University.

- **Laboratory Conditions**

Finding laboratories where applications that students may encounter in the field after graduation are carried out and students can improve their practical skills.

Department of Medical Services and Techniques / First and Emergency Aid Program

In pre-hospital emergency health services that require urgent intervention, especially in medical emergencies, accidents and disasters, who can provide basic and advanced life support to the sick and injured, can recognize system traumas and provide appropriate emergency approach, can prevent a significant part of disability and death by providing qualified emergency health services, It aims to provide care service at national and international level by using first and emergency aid knowledge and techniques in accordance with scientific rules.

Department of Health and Care Services / Aged Care Program

Elderly Care Programme; using aged care knowledge and techniques; It aims to train elderly care technicians who have important duties in keeping the elderly and people in need of care alive, freeing them from future concerns, using their spare time productively, incorporating the elderly, family and society into care practices and making them a habit and enforce it.

Department of Physiotherapy and Rehabilitation / Physiotherapy Program

- Qualified academic staff
- Curriculum with up-to-date course content
- Equipped laboratory facilities
- Internship opportunities in contracted hospitals with expert supervisors in the field
- Social and academic activities planned and implemented with students
- Having a wide range of employment opportunities belonging to our department
- Continuing education with applied lessons.

Department of Medical Services and Techniques / Operating Room Services Program

- With the education curriculum we have prepared for you, both theoretical and practical courses are given for 2 years.
- In our department, besides the Basic Medicine courses, professional skills are given in the courses.
- With the experienced and well-equipped academic staff of our school, theoretical lessons and practical training are started before they go to the field, and from the second grade on, we prepare our students for the profession with practical training in health facilities.

- We have an application laboratory where our students can develop their theoretical knowledge, have dexterity and make necessary applications in the application laboratory of our university.
- It is planned that our students' internships will be held in existing hospitals in our province in order to gain professional experience.

Program (will be opened in the 2023-2024 Academic Year)

MISSION

To train solution-oriented, self-sacrificing, qualified health personnel who are equipped with contemporary knowledge and skills, have cultural background and communication, and attach importance to human health and ethical values, with the support of planned training programs based on national and international professional and ethical principles.

VISION

To be at the highest level in its field with the quality education it provides by educating individuals who are equipped with up-to-date knowledge, open to knowledge sharing, and have high level knowledge and experience in the professional field, who can easily adapt to the constantly renewing science, developing and changing information system.

CONTENT, DESCRIPTION

Our Vocational School of Health Services, with the Law No. 7141 on 09/05/2018 on the Amendment of the Higher Education Law and Some Laws and Decrees, published in the Official Gazette dated May 18, 2018 and numbered 30425, and with the additional article made to the law numbered 2809, Gaziantep Science and Technology Under the name of the University, and then in the Official Gazette dated 18 January 2019 and numbered 30659, Article 14 of the Law No. 7161 and Supplementary 178 of the Law No. 2809 on the Amendment of Tax Laws and Some Laws and Decrees with the Force of Law. The phrase "Gaziantep Science and Technology University" in the first paragraph of the title of the article was changed to "Gaziantep Islamic Science and Technology University". In the 2021-2022 academic year of our Vocational School, students were admitted to Physiotherapy, Elderly Care, Medical Laboratory Techniques and First and Emergency Aid programs. In order to provide an effective health education, appropriate physical spaces, sufficient tools and equipment are needed, but the basic element in the provision of these services is human. The most important power in sustaining health education and services according to the changing needs of the society is human power. The most important way to make effective use of manpower is through a good education. The purpose of education in the field of health

is to ensure that the trained technical personnel are constantly employed in the health sector and to play an active role in meeting the country's needs. In this context, we believe that the way to ensure that our students are well-equipped in providing health education is through good planning and effective and efficient use of resources. One of the conditions for public institutions to be carried out more efficiently and in accordance with their establishment purposes and to overcome financial and administrative problems is the planned execution of their activities. Thus, services in institutions will be produced in a planned way, their failing aspects can be measured, they will be evaluated and tracked in the light of certain criteria. On the other hand, it is necessary to act within the framework of certain plans in the planning of the activities of the institution in financial terms. One of the basic tools of carrying out activities with planned and measurable criteria is “strategic planning”. Our Vocational School fulfills the tasks it undertakes by providing a contemporary education to our youth, which is the assurance of our future, in the light of reason and science; It trains hardworking, value-producing technicians. Our goal will be to make our School one of the few Vocational Schools in Turkey after this point where we came with great excitement.

JOB OPPURTUNITIES

Department of Medical Services and Techniques / Medical Laboratory Techniques Program

Graduates of the Medical Laboratory Techniques Program are trained in biochemistry, microbiology, histology, hematology, serology in hospitals, medical faculties, private clinics and analysis laboratories, health centers, research centers of other health institutions, public health institutes and food industry enterprises, public and private treatment institutions affiliated to the Ministry of Health. They can work in pathology, parasitology laboratories, IVF centers and blood centers. They can also work in the microbiology research units of pharmaceutical companies and the food industry.

Department of Health and Care Services / Aged Care Program

Elderly care technicians carry out elderly care services;

- In private nursing homes affiliated to Social Services Directorates,
- In the elderly care services carried out in non-governmental organizations and private institutions,
- Nursing homes for the elderly, hostels for the weak, day care centers for the elderly,
- They can work in home care services for the elderly in the units affiliated to the Health Directorates.

Department of Physiotherapy and Rehabilitation / Physiotherapy Program

- In rehabilitation centers,
- In private clinics,
- In sports clubs,
- In state hospitals affiliated to the Ministry of Health,

- In university research hospitals,
- In private hospitals,
- In special education centers,
- Sports/health centers,
- In sports clubs, nursing homes,
- In spa/thermal facilities,
- They can work in special branch centers.

Department of Medical Services and Techniques / First and Emergency Aid Program

Provided that they have passed the KPSS exam and are appointed, they can work in public institutions and organizations in this sector, as well as as first and emergency technicians in private health institutions and organizations, health personnel in emergency aid and patient transport ambulances, call reception personnel in command and control centers and health personnel in hospital emergency services. they work. Graduates of this department can also work as an ambulance driver when necessary (after safe driving training).

Department of Medical Services and Techniques / Operating Room Services Program

- Those who graduate from the program receive the title of Operating Room Technician. They work in the operating room in public and private health institutions and organizations under the supervision of the relevant surgical branch specialist.
- With the low number of graduates and the proliferation of private hospitals, it has become a much needed profession. Since hospitals need specially trained health personnel in this field, their employment opportunities are high. Operating Room Technicians work in the operating room units of private and public hospitals.
